Cellular localization

Cytoplasm, cytoskeleton. Nucleus . Cytoplasm, cytoskeleton, spindle . Midbody . In a filamentous pattern adjacent to the nucleus of migrating cerebellar granule cells. Colocalizes with tubulin and dynein and with the microtubule organizing center. Distributed throughout the cytoplasm of non-

migrating cells. A small proportion is nuclear, in a punctate pattern. Localizes to the mitotic spindle in a EML4-dependent manner

**Background** 

This gene encodes a nuclear distribution protein that plays an essential role in mitosis and cytokinesis. The encoded protein is involved in spindle formation

during mitosis and in microtubule organization during cytokinesis.

Pseudogenes of this gene are found on chromosome 2. [provided by RefSeq,
