Concentration	1 mg/ml
Observed band	67kD
Human Gene ID	10873
Human Swiss-Prot Number	Q16798
Alternative Names	ME3; NADP-dependent malic enzyme; mitochondrial; NADP-ME; Malic enzyme 3
Background	Malic enzyme catalyzes the oxidative decarboxylation of malate to pyruvate using either NAD+ or NADP+ as a cofactor. Mammalian tissues contain 3 distinct isoforms of malic enzyme: a cytosolic NADP(+)-dependent isoform, a mitochondrial NADP(+)-dependent isoform, and a mitochondrial NAD(+)-dependent isoform. This gene encodes a mitochondrial NADP(+)-dependent isoform. Multiple alternatively spliced transcript variants have been found for this gene, but the biological validity of some variants has not been determined. [provided by RefSeq, Jul 2008],
