Application notes Flow Cytometry: 0.5-1 ug/million cellsIF: 1-2 ug/mlWB:

0.5-1 ug/mlIHC (FFPE): 0.5-1 ug/ml for 30 minutes at RT (1)Prediluted format: incubate for 30 min at RT (3)The concentration stated for each application is a general starting point. Variations in protocols, secondaries and substrates may require the Bcl-X antibody to be titered up or down for optimal performance.1. Staining of formalin-fixed tissues requires boiling tissue sections in 1mM EDTA buffer, pH 7.5-8.5, for 10-20 min followed by cooling at RT for 20 minutes.2. This antibody reacts with both BclXS and BclXL.3. The prediluted format is supplied in a dropper bottle and is optimized for use in IHC. After epitope retrieval step (if required), drip mAb solution onto

the tissue section and incubate at RT for 30 min.

Isotype IgG2a

Clonality Monoclonal

Uniprot ID Q07817
