<b>Application notes</b>	<p>ELISA: Sandwich: To detect hLIGHT by sandwich ELISA (using 100 µL/well antibody solution) a concentration of 0.25 - 1.0 µg/mL of this antibody is required. This biotinylated polyclonal antibody, in conjunction with our Polyclonal Anti-Human LIGHT (XP-5215) as a capture antibody, allows the detection of at least 0.2 - 0.4 ng/well of recombinant hLIGHT.</p> <p>Western Blot: To detect hLIGHT by Western Blot analysis this antibody can be used at a concentration of 0.1 - 0.2 µg/mL. Used in conjunction with compatible secondary reagents the detection limit for recombinant hLIGHT is 1.5 - 3.0 ng/lane, under either reducing or non-reducing conditions.</p>	1 2 3 4 5 6 7 8 9 10 11 12
