Biotin-14-dATP (orb1733817)

Description	Biotin-14-dATP is enzymatically incorporated into DNA/cDNA as sub-stitute for its natural counterpart dATP. The resulting Biotin-labeled DNA/cDNA probes are subsequently detected using streptavidin conjugated with horseradish peroxidase (HRP), alkaline phosphatase (AP), a fluorescent dye or agarose/magnetic beads. Optimal sub-strate properties for Nick Translation are ensured by a 14-atom linker attached to the N6 position of adenine. For PCR incorporation experiments e.g. with Taqpolymerase Biotin-11-dATP is recommended whose Biotin moiety is attached to the N7-Deaza position of adenine via a 11-atom linker. Recommended Biotin-14-dATP/dATP ratio for Nick Translation: 50% Biotin-14-dATP/50% dATP.
