

## **Product Datasheet**

## Simian S100 Calcium Binding Protein A9 (S100A9) ELISA Kit (orb1736767)

## **Description**

The test principle applied in this kit is Sandwich enzyme immunoassay. The microtiter plate provided in this kit has been pre-coated with an antibody specific to Simian S100A9. Standards or samples are added to the appropriate microtiter plate wells then with a biotin-conjugated antibody specific to Simian S100A9. Next, Avidin conjugated to Horseradish Peroxidase (HRP) is added to each microplate well and incubated. After TMB substrate solution is added, only those wells that contain Simian S100A9, biotin-conjugated antibody and enzyme-conjugated Avidin will exhibit a change in color. The enzyme-substrate reaction is terminated by the addition of sulphuric acid solution and the color change is measured spectrophotometrically at a wavelength of  $450 \text{nm} \pm 10 \text{nm}$ . The concentration of Simian S100A9 in the samples is then determined by comparing the OD of the samples to the standard curve.

**Reactivity** Primate

**Range** 0.78-50 ng/mL

**Concentration** 50 ng/mL

**Note** For research use only

## **Application notes**

standard: 50 ng/mL. Test principle: The test principle applied in this kit is Sandwich enzyme immunoassay. The microtiter plate provided in this kit has been pre-coated with an antibody specific to Simian S100A9. Standards or samples are added to the appropriate microtiter plate wells then with a biotin-conjugated antibody specific to Simian S100A9. Next, Avidin conjugated to Horseradish Peroxidase (HRP) is added to each microplate well and incubated. After TMB substrate solution is added, only those wells that contain Simian S100A9, biotin-conjugated antibody and enzyme-conjugated Avidin will exhibit a change in color. The enzyme-substrate reaction is terminated by the addition of sulphuric acid solution and the color change is measured spectrophotometrically at a wavelength of 450nm ± 10nm. The concentration of Simian S100A9 in the samples is then determined by comparing the OD of the samples to the standard curve

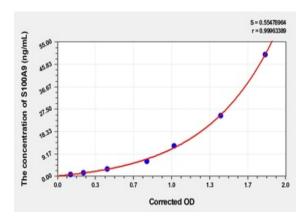

**Sample Types** serum, plasma, tissue homogenates, cell lysates, cell culture supernates and

other biological fluids

**Assay Time** 3.5h

**Sensitivity** 0.27 ng/mL

**Expiration Date** Please enquire.
