

Product Datasheet

Rat ACTH(Adrenocorticotropic Hormone) ELISA Kit (orb1806851)

Description Rat ACTH(Adrenocorticotropic Hormone)

ELISA Kit

Reactivity Rat

Range 15.63-1000pg/mL

Target ACTH

Note For research use only

Application notes This ELISA kit uses the Competitive-ELISA

principle. The micro ELISA plate provided in this kit has been pre-coated with Rat ACTH. During the reaction, Rat ACTH in the sample or standard competes with a fixed amount of Rat ACTH on the solid phase supporter for sites on the Biotinylated Detection Ab specific to Rat ACTH. Excess conjugate and unbound sample or standard are washed away, and Avidin-Horseradish Peroxidase (HRP) conjugate are added to each micro plate well and incubated. Then a TMB substrate solution is added to each well. The enzyme-substrate reaction is terminated by

the addition of stop solution and the color turns from blue to yellow. The optical

density (OD) is measured

spectrophotometrically at a wavelength of $450 \text{ nm} \pm 2 \text{ nm}$. The concentration of Rat ACTH in tested samples can be calculated by comparing the OD of the samples to the

standard curve.

Sample Types serum, plasma, Tissue homogenate and

Other biological samples

Sensitivity 9.38 pg/mL

Expiration Date Please enquire.
