

Product Datasheet

Human GT(Gastrin) ELISA Kit (orb1807111)

Description	Human GT(Gastrin) ELISA Kit
Reactivity	Human
Range	15.63-1000 pg/mL
Target	GT
Note	For research use only
Application notes	<p>This ELISA kit uses the Competitive-ELISA principle. The micro ELISA plate provided in this kit has been pre-coated with Human GT. During the reaction, Human GT in the sample or standard competes with a fixed amount of Human GT on the solid phase supporter for sites on the Biotinylated Detection Ab specific to Human GT. Excess conjugate and unbound sample or standard are washed away, and Avidin-Horseradish Peroxidase (HRP) conjugate are added to each micro plate well and incubated. Then a TMB substrate solution is added to each well. The enzyme-substrate reaction is terminated by the addition of stop solution and the color turns from blue to yellow. The optical density (OD) is measured spectrophotometrically at a wavelength of 450 nm ± 2 nm. The concentration of Human GT in tested samples can be calculated by comparing the OD of the samples to the standard curve.</p>
Sample Types	serum, plasma, Tissue homogenate and Other biological samples
Sensitivity	5.47 pg/mL
Expiration Date	Please enquire.
