**Application notes**

ELISA: Peptide ELISA: antibody detection limit dilution 1:64000. WB: Preliminary experiments gave an approx 90kDa band in lysates of cell line HeLa after 0.1 µg/ml antibody staining. Please note that currently we cannot find an explanation in the literature for the band we observe given the calculated size of 71.0kDa according to NP\_079427.3. The 90kDa band was successfully blocked by incubation with the immunizing peptide. We would appreciate any feedback from people in the field - have any results been reported with other antibodies/lysates Have any further splice variants/modified forms been reported
