
Product Datasheet

Mouse EPCAM(Epithelial Cell Adhesion Molecule) ELISA Kit (orb1947020)

Description

Mouse EPCAM(Epithelial Cell Adhesion

Reactivity

Mouse

Range

78.13-5000pg/mL

Target

EPCAM

Note

For research use only

Application notes

This ELISA kit uses the Sandwich-ELISA principle. The micro ELISA plate provided in this kit has been pre-coated with an antibody specific to Mouse EPCAM. Standards or samples are added to the micro ELISA plate wells and combined with the specific antibody. Then a biotinylated detection antibody specific for Mouse EPCAM and Avidin-Horseradish Peroxidase (HRP) conjugate are added successively to each micro plate well and incubated. Free components are washed away. The substrate solution is added to each well. Only those wells that contain Mouse EPCAM, biotinylated detection antibody and Avidin-HRP conjugate will appear blue in color. The enzyme-substrate reaction is terminated by the addition of stop solution and the color turns yellow. The optical density (OD) is measured spectrophotometrically at a wavelength of 450 nm \pm 2 nm. The OD value is proportional to the concentration of Mouse EPCAM. You can calculate the concentration of Mouse EPCAM in the samples by comparing the OD of the samples to the standard curve.

Sample Types

serum, plasma, Tissue homogenate and Other biological samples

Uniprot ID
[Q99JW5](#)
Sensitivity

46.88 pg/mL

Expiration Date

Please enquire.
