

## **Product Datasheet**

## Human Myelin Associated Glycoprotein (MAG) ELISA Kit (orb1949836)

**Description** Human Myelin Associated Glycoprotein (MAG) ELISA Kit

**Reactivity** Human

Range 0.32-20ng/mL

Target MAG

**Note** For research use only

**Application notes** This ELISA kit uses the Sandwich-ELISA principle. The micro ELISA plate provided

in this kit has been pre-coated with an antibody specific to Human MAG. Standards or samples are added to the micro ELISA plate wells and combined with the specific antibody. Then a biotinylated detection antibody specific for Human MAG and Avidin-Horseradish Peroxidase (HRP) conjugate are added successively to each micro plate well and incubated. Free components are washed away. The substrate solution is added to each well. Only those wells that contain Human MAG, biotinylated detection antibody and Avidin-HRP conjugate will appear blue in color. The enzyme-substrate reaction is terminated by the addition of stop solution and the color turns yellow. The optical density (OD) is measured spectrophotometrically at a wavelength of 450 nm  $\pm$  2 nm. The OD

concentration of Human MAG in the samples by comparing the OD of the

value is proportional to the concentration of Human MAG. You can calculate the

samples to the standard curve.

Sample Types Tissue homogenate

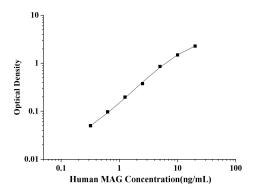

Uniprot ID P20916

**Sensitivity** 0.19 ng/mL

**Expiration Date** Please enquire.

68 TW Alexander Drive, Durham, NC, 27713, United States
