

Product Datasheet

**Goat IgG Mouse IgG1 IgG2A IgG2B IgG3 IgA IgM
(Biotin) antibody (orb21642)**

Description

Biotin-conjugated IgG fraction of

Mouse IgG, IgA and IgM, Fc specific. ...

Species/Host

Goat

Conjugation

Biotin

Preservatives

Biotin-coupled purified hyperimmune goat IgG lyophilized from a solution in phosphate buffered saline (PBS, pH 7.2). No preservative added, as it may interfere with the antibody activity. IgG protein concentration 10 mg/ml. Biotin/IgG protein molar ratio

Form/Appearance

Biotin-coupled purified hyperimmune goat IgG lyophilized from a solution in phosphate buffered saline (PBS, pH 7.2). No preservative added, as it may interfere with the antibody activity. IgG protein concentration 10 mg/ml. Biotin/IgG protein molar ratio

Storage

Storage: The lyophilized conjugate is shipped at ambient temperature and may be stored at +4°C; prolonged storage at or below -20°C. Prior to use, an aliquot is thawed slowly at ambient temperature, spun down again and used to prepare working dilutions by adding sterile phosphate buffered saline (PBS, pH 7.2). Repeated thawing and freezing should be avoided. Working dilutions should be stored at +4°C, not refrozen, and preferably used the same day. If a slight precipitation occurs upon storage, this should be removed by centrifugation. It will not affect the performance of the immunoconjugate

Note

For research use only

Clonality

Polyclonal
