
Product Datasheet

Goat IgG Hamster IgG (HRP) antibody (orb22039)

Description

Horseradish peroxidase-conjugated IgG

hamster IgG, heavy an...

Species/Host

Goat

Reactivity

Hamster

Conjugation

HRP

Tested

DOT, ELISA, ICC, WB

Applications
Preservatives

Peroxidase-coupled purified hyperimmune goat IgG lyophilized from a solution in phosphate buffered saline (PBS, pH 7.2). No preservative added, as it may interfere with the antibody activity.

Form/Appearance

Peroxidase-coupled purified hyperimmune goat IgG lyophilized from a solution in phosphate buffered saline (PBS, pH 7.2). No preservative added, as it may interfere with the antibody activity.

Storage

Storage: The lyophilized conjugate is shipped at ambient temperature and may be stored at +4°C; prolonged storage at or below -20°C. Prior to use, an aliquot is thawed slowly at ambient temperature, spun down again and used to prepare working dilutions by adding sterile phosphate buffered saline (PBS, pH 7.2). Repeated thawing and freezing should be avoided. Working dilutions should be stored at +4°C, not refrozen, and preferably used the same day. If a slight precipitation occurs upon storage, this should be removed by centrifugation. It will not affect the performance of the immunoconjugate

Note

For research use only

Clonality

Polyclonal

Source

Goats were immunized with purified normal IgG isolated from pooled hamster serum. Freund's complete adjuvant is used in the first step of the immunization procedure.
