

Product Datasheet

Mouse IgG2a Isotype Control antibody (orb43541)

www.biorbyt.com

Descriptionnts. Mouse IgG2a Isotype Control

Conjugation Unconjugated

Tested ELISA, FC, ICC, IHC-Fr, IHC-P, IP, WB

Applications

Phosphate buffered saline (PBS), pH 7.4, 15 mM Preservatives

sodium azide

Concentration 1 mg/ml

Store at 2-8°C. Do not freeze. Storage

For research use only Note

Application notes Negative control: The reagent is intended as an

> isotype control to establish the amount of nonspecific antibody binding. For your particular experiment, use the same concentration of this control antibody as the recommended working concentration of the antigen-specific antibody. Also, when working with prediluted antibodies, dilute the isotype control to the same concentration as is the concentration of the antigen-specific antibody in the prediluted antibody solution you are using. If under particular experimental conditions the background signal of the isotype control is too high (usually when working concentrations of used antibodies are above 10 µg/ml of incubation mixture), change the conditions of your experiment to reduce the

background.

Isotype Mouse IgG2a

Clonality Monoclonal

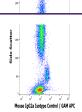

Purity Purified by protein-A affinity chromatography.

Dilution Range Negative control: The reagent is intended as an

isotype control to establish the amount of nonspecific antibody binding. For your particular experiment, use the same concentration of this control antibody as the recommended working concentration of the antigen-specific antibody. Also, when working with prediluted antibodies, dilute the isotype control to the same concentration as is the concentration of the antigen-specific antibody in the prediluted antibody solution you are using. If under particular experimental conditions the background signal of the isotype control is too high (usually when working concentrations of used antibodies are above 10 µg/ml of incubation mixture), change the

conditions of your experiment to reduce the

background.
