Surface Plasmon Resonance Kinetic Characterization of Polyclonal Antibody Affinity. Purified polyclonal antibodies were immobilized on a Protein A/G coated Carterra LSA sensor chip (PAGH200M) at concentrations of 5, and 50 ug/ml in duplicate. Antibodies on the surface were exposed to interaction with peptides sequentially via microfluidic controlled flow at 333nM peptide concentration for kinetic characterization of the binders for affinity and specificity, followed by curve fitting using the Kinetics software. K_d determinations for both concentrations were averaged and results and standard deviation are shown.

WB Suggested Anti-OMA1 Antibody Titration: 0.2-1 ug/ml,
Positive Control: 721_B cell lysate.
